

# VB Visitor Series

The Visibadge XFR package uses the more powerful SQL database platform which assures both speed and reliability for large organisations and busy receptions. 'XFR' boasts all the features of our 'Pro Ex' suite but with more powerful reporting features and the additional facility to capture photos of employees/hosts to produce PVC ID cards.

One of the great benefits of having XFR is the ability to add the e-permit module for contractors' permit-to-work, which conforms to Health & Safety regulations for contractors working on-site.

The 'pre-booking' intranet or email-based module is also available to allow staff members to pre-book their own visitors, thereby reducing congestion at busy times

## FEATURES
